GRI Standards Certified Training Course: Reporting with GRI Standards 2021

Venue: Zoom Meeting Room

24th, 25th & 31st October 2023

Time: 09:00 to 13:00 hours (SGT)

Sustainability Reports convey not only the environmental, economic, and social performance of a business, but at the same time prove to be an effective tool to measure, manage, and improve organizational performance and protect an organization's reputation. This is particularly so for the countries in the Asia region where we have committed to Agenda 2030 for the United Nation Sustainable Development Goals.

The **Global Reporting Initiative (GRI)** is an international independent standards organization that helps businesses, governments, and other organizations understand and communicate their impacts on material issues such as climate change, human rights and corruption. More than 80% of world's leading reporters use GRI Standards as the framework for developing their sustainability reports owing it's modular and inter-related structure, and step-by-step guidance on communicating sustainability performance. In Singapore, the **Singapore Stock Exchange (SGX)** also requires every issuer to prepare an annual sustainability report, which must describe the issuer's sustainability practices with reference to 6 Primary components of sustainability report.

The **Task Force on Climate-related Financial Disclosures (TCFD)** is a framework developed by the TCFD to help organizations more effectively disclose climate-related risks and opportunities through their existing reporting processes, in order to increase and improve the reporting of climate-related disclosures.

SUSTAINABILITY REPORTING: BENEFITS

Sustainability reports convey an organization's environment and social performance of companies alongside traditional financial results. Its benefits include:

- ✓ Access to capital
- ✓ Enhanced risk management
- ✓ Innovation
- ✓ Resource efficiency
- ✓ Strengthen data management systems
- ✓ Transparency in communication
- ✓ Customer and employee loyalty
- ✓ Forging stakeholder relationships at various levels

WHY TRAIN

Companies seeking to enhance their sustainability performance and in-house capacity need to equip themselves with the requisite knowledge on sustainability reporting standards. We have designed this course to support companies and individuals in developing internal expertise with minimal involvement of external support and produce reports that are assurance worthy.

WHY TEMBUSU

TEMBUSU Asia is an organization embracing UN SDGs, in its efforts to augment sustainability expertise in the region. This training program is being delivered by experienced sustainability advisors who have vast experience in developing best in class reports, conducting trainings and auditing leading sustainability reports in ASEAN and the Asia region.

OUTCOME

Perspectives on concepts of sustainability reporting and enhanced exposure on how to develop sustainability reports. The training is expected to:

- Enhance knowledge of participants on GRI standards, evaluating sustainability reports
- Benchmark internal reporting with peers and gear for better reporting
- Identifying, engaging with stakeholders
- Material matters identification, prioritization and target setting
- Collect, compile sustainability data and present sustainability reports
- Overview of Sustainable Development Goals and their interlinkages with sustainability performance of organizations

TAKEAWAYS

Post completion of the course, participants will receive a certificate directly from the Global Reporting Initiative (GRI).

25% discount on the GRI Standards Exam fee, by GRI for those candidates who successfully complete this course and the GRI Licensed Course – Human Rights & SDGs.

WHAT IS COVERED

This course outlines and introduces participants to the concepts of GRIs reporting principles (content & quality), engaging with stakeholders, material topics identification, prioritization and target setting. Further guidance is provided on identifying material topics. Management approach, data collection /compilation and presentation are covered to enhance participants knowledge on GRI Standards. This course will conduct additional discussion and case study on TCFD and the sustainability reporting guide by the Singapore Stock Exchange (SGX).

Each session has case studies and interactive breakout sessions to enable participants to understand the standards and report development process. An end-of-course evaluation will also be conducted to assess participants' understanding of the course content through an analysis of a selected company's sustainability report.

A session by GRI secretariat is part of the training to answer any specific queries of participants and support available from GRI.

WHO NEEDS TO ATTEND

This course is open for all levels of management, sustainability practitioners, consultants, auditors, corporate communications, legal, HSE and operations executives, academicians, NGOs, etc.

Er. Tan Seng Chuan, Trainer

Er. Tan is the Managing Director of TEMBUSU Asia, a leading sustainability consulting company in Asia supporting organisations to fulfil their aspirations of natural resource stewardship, enhanced environmental performance, and sustainable development objectives.

Er. Tan is the Emeritus President of the Institution of Engineers, Singapore, Chairman of Chartered Engineering Board Singapore, Executive Vice President of World Federation of Engineering Organisation, Chairman of Active, Beautiful, Clean Water Professional Program.

Er. Tan is also a GRI Certified Sustainability Professional, Registered Professional Engineer and Chartered Engineer (Environment & Water) in Singapore. His professional experiences covered sustainability, environmental, engineering and program management in the area of sustainability strategy, carbon validation and verification, climate actions and urban resilience planning and development.

Shierley Josephine, Trainer

With a wealth of experience exceeding 8 years as a sustainability consultant, Shierley Josephine stands as an adept professional in the fields of sustainability reporting and the meticulous analysis of environmental, social, and governance (ESG) data. Holding esteemed certifications in GRI Standard 2021 and ISO 14064, her active involvement in ESG and Sustainability spans a diverse spectrum of industries including oil and gas, mining, agriculture, banking, manufacturing, FMCG, and telecommunications. Her proficiency in curating comprehensive sustainability reports finds its roots not only in her postgraduate degree from Leeds Beckett University, UK, where she specialized in Business Process Re-engineering and Management Consultancy, but also in her earlier academic journey, which includes a background in Industrial Engineering earned from Pelita Harapan University. Through her steadfast commitment, she consistently strives to instigate positive environmental and social transformation, all the while facilitating strategic progress for a global clientele.
